God.of.War.Chains.of.Olympus.HD.PlayStation.Network.Key.DePack.And.Crack.1.0.21.3

God.of.War.Chains.of.Olympus.HD.PlayStation.Network.Key.DePack.And.Crack.1.0.21.3.

God.of.War.Chains.of.Olympus.HD.PlayStation.Network.Key.DePack.And.Crack.1.0.21.3.1. Field of the Invention The present invention relates to a gate terminal structure and a method of manufacturing the same, and particularly to a gate terminal structure of a liquid crystal display panel and a method of manufacturing the same. 2. Description of the Prior Art Generally, a liquid crystal display panel is provided with a thin film transistor (TFT) array substrate in which active layer, channel layer, source electrode and drain electrode are provided and a color filter substrate in which an opposite electrode is provided. Between the TFT array substrate and the color filter substrate, a liquid crystal layer and a sealant are provided. In the TFT array substrate, data lines of the TFTs, which are commonly used, are arranged in parallel to each other while gate lines of the TFTs, which control the operation of the TFTs, are arranged at the same time. The TFTs are disposed at the intersections between the data lines and the gate lines. The TFTs are used to switch the signal voltage applied to the data lines in response to the voltage applied to the gate lines and thus to allow the liquid crystal display panel to perform the desired image display. To accomplish the display function of the liquid crystal display panel, the signal voltage is applied to the drain electrode and the opposite electrode, which are commonly disposed with each other. The signal voltage is also applied to the source electrode through the channel layer of the TFTs. The TFTs are disposed on the TFT array substrate in a matrix form of intersection with the data lines and the gate lines. A gate electrode of each of the TFTs is connected to the corresponding gate line of the gate lines by means of the gate terminal. On the other hand, a source electrode of each of the TFTs is connected to the corresponding data line by means of the source terminal. The gate terminal is electrically connected to the gate 0cc13bf012
